

## Pediclear

Because your clients want to show off their new pedicure, not a new skin infection.

Foot Baths Provide the Perfect Environment for Dangerous Bacteria. Bacteria can cause serious skin infections. This makes choosing the right spa disinfectant a critical decision.

One simple step.

By adding just 2 grams of Pediclear™ at the start, you are disinfecting the water in your foot spa basin. Think about that - you just killed 99.99% of the harmful bacteria in the water! Now you know the water is safe and your client can sit back and relax without worrying about what's in there besides her feet.

All that power yet Pediclear™ is gentle on both your clients and your equipment. Pediclear™ is a low cost disinfectant. With an application of 2 grams per 5 to 8 gallons of water, disinfection was never so easy.

Your clients trust you to offer the highest quality spa services. Give them the peace of mind that only EPA approved Pediclear™ foot spa disinfectant can give.

Peace of mind.

One simple step - two little grams.
